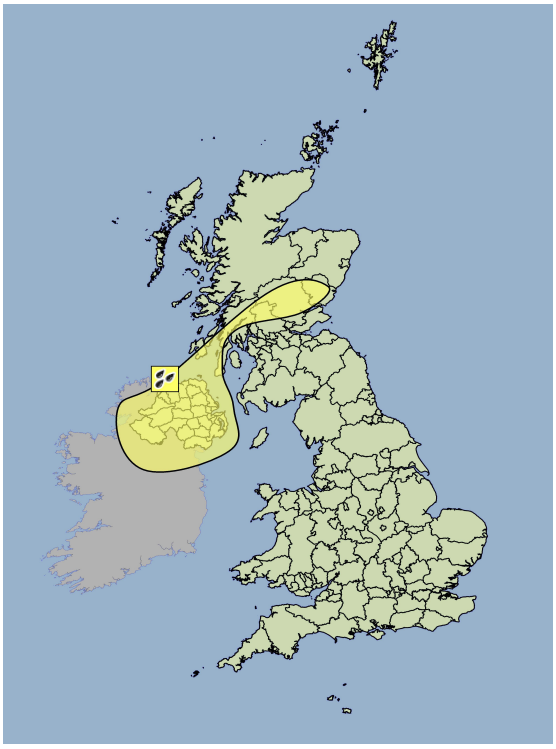
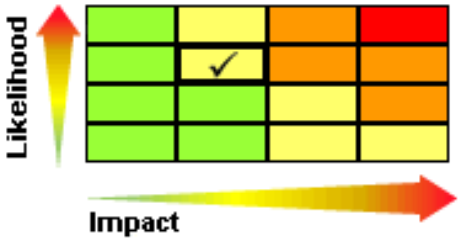
National Severe Weather Warning Service





Chief Forecasters Assessment
Another active Atlantic frontal system is forecast to cross the UK during Sunday, linked to a very deep depression near northwest Britain. Segments of the frontal system look like revolving around the depression to affect parts of the north again early on Monday.

Rainfall accumulations of 25 to 40 mm are expected quite widely, possibly greater than 50 mm over the higher ground of Scotland. Gales or severe gales will be an additional hazard: please see separate warning.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **04:00 on Sun, 26th Jan 2014** until **09:00 on Mon, 27th Jan 2014**

Another spell of wet and very windy weather will cross the UK from the west during Sunday. The heaviest rain is likely to clear for a time later on Sunday but will probably return to affect some areas overnight and into the first part of Monday. Heavy snow will fall on higher ground, primarily above 300 metres.

The public should be aware of the potential for disruption due to localised flooding. This updates the warning originally issued on Wednesday, splitting off a northern section and extending it into parts of Scotland.
